

Deploy FastAPI to Cpanel

<https://lucidgen.com/en/how-to-deploy-fastapi-on-cpanel/>

Deploy FastAPI on cPanel

To quickly Deploy FastAPI on cPanel, we will start with a simple FastAPI project with 2 files as follows:

Main.py

```
from fastapi import FastAPI
```

```
from pydantic import BaseModel
```

```
class Item(BaseModel):
```

```
    name: str
```

```
    description: str | None = None
```

```
    price: float
```

```
    tax: float | None = None
```

```
app = FastAPI()
```

```
@app.get("/")
```

```
async def root():
```

```
    return {"message": "Hello World"}
```

```
@app.post("/items/")
```

```
async def create_item(item: Item):
```

```
    return item
```

requirement.txt

fastapi

pydantic

uvicorn

Step1:

Create your sub domain

Step 2:

Upload your files to the application root of the subdomain

Step 3:

Open setup python app

Application root => BackendHub/External/Special

Application url => <https://ainml.hydottech.com/>

Step 4:

Stop the python app

Step 5:

Copy the source [source

/home/hydottec/virtualenv/BackendHub/External/Special/3.12/bin/activate && cd

/home/hydottec/BackendHub/External/Special] to

terminal and run pip install requirement.txt

Step 6:

Run this command

screen -S myfastapi [anyName will do]

Step 7:

Run `uvicorn main:app --host 0.0.0.0 --port 8000`

If port already in used, change port

Step 8:

Press `CTRL + A + D` to detach from the screen

Step 9:

Modify the `.htaccess`

RewriteEngine On

Force HTTPS

`RewriteCond %{HTTPS} !=on`

`RewriteRule ^(.*)$ https://%{HTTP_HOST}/$1`
`[R=301,L]`

Reverse Proxy

`RewriteRule ^(.*)$`
`http://ainmlserverapi.hydotech.com:8001/$1 [P,L]`

Command	Function
<code>screen -S myfastapi</code>	Create a new screen named myfastapi
<code>screen -ls</code>	List all running screens
<code>screen -r myfastapi</code>	Back to the screen that myfastapi is running
<code>Ctrl + A + D</code>	Exit the screen but keep the process running
<code>exit</code>	Exit and close the screen
